## OUTPUT:

The screenshot shows the IBM Watson IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue bar at the top contains the device name 'DISTANCEDETECT', its status 'Disconnected', type 'ULTRASON', and location 'Device'. Below this, there are tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is selected, showing a table of events. The table has columns for 'Event', 'Value', 'Format', and 'Last Received'. There are five rows of data, all showing a distance of 141.21 and 'No' object detected. The interface also includes a 'Add Device' button and a pagination bar at the bottom.

The screenshot shows an Arduino IDE with a code editor on the left and a simulation window on the right. The code is for an ESP32 connected to an HC-SR04 ultrasonic sensor. It includes comments for IBM Watson IoT Platform credentials and a callback function to send data to the cloud. The simulation window shows the sensor's output and the data being sent to the cloud.
